

CloudCard

WITH CLOUDPHOTO CONNECT

CloudCard streamlines your ID card process and saves time by letting students submit their own photos.

cloudcard Steps:

- CloudPhoto Connect uploads ID records to CloudCard
- Students receive a secure link
- Students upload a photo or snap a selfie
- Optional addition of questions and proof of ID
- Card office approves photos or lets Helperbot automatically approve/deny photos
- CloudPhoto Connect downloads the approved photos to the ID database

Online ID Photo Submission

CloudCard allows students to snap a selfie and even accept their cardholder agreement using a phone, tablet, or computer, from the comfort and safety of home.

There's no app to download and no password to forget. The student is emailed a secure, single-use login link that allows them to upload their photo. Once approved, the photos are automatically downloaded to the ID database using CloudPhoto Connect.

CloudPhoto Connect

This powerful yet lightweight Windows software automates the data sync and photo transfer between CloudCard and the campus ID card database.

CloudPhoto Connect is a separate automation utility designed to sync data and download photos to any open database source including: IDMS, RapIDcard, and most other ID production and campus one card systems.
